

Rajesh Kodaganti

Software Development Engineer

Redmond, WA | (747) 366-0793 | rajeshkodaganti.work@gmail.com | linkedin.com/in/rajesh-kodaganti-323118215

PROFESSIONAL SUMMARY

Software Development Engineer with a Master of Science in Computer Engineering and hands-on experience designing and building scalable, distributed, cloud-native systems in Python. Delivered a six-phase outage-management pipeline supporting Severity 0–2 incidents across 70+ Microsoft Identity services, combining event-driven architecture, REST API orchestration, and GenAI-powered classification. Skilled in object-oriented design, microservices, CI/CD, monitoring and troubleshooting production systems, RAG, document processing, and secure infrastructure as code.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, R, C, Embedded C, HTML

Software Engineering: FastAPI, REST API orchestration, microservices, event-driven architecture, ETL/data pipelines, Git/GitHub, CI/CD, testing & troubleshooting

Cloud & DevOps: Azure Functions, Logic Apps, Service Bus, Blob Storage, Key Vault, Application Insights, Entra ID, Bicep (IaC), Azure AI Search, Docker, Apache Airflow

AI & Machine Learning: Azure OpenAI, Azure Document Intelligence, RAG, LLMs, NLP, prompt engineering, PyTorch, TensorFlow, Model Context Protocol (MCP)

PROFESSIONAL EXPERIENCE

AI Software Engineer (Contract) — Microsoft

Oct 2025 – Present | Redmond, WA

- Designed and developed a scalable, six-phase outage-management pipeline automating incident ingestion, enrichment, classification, validation, and reporting for Severity 0–2 incidents across 70+ Microsoft Identity services.
- Built Python Azure Functions and KQL-based workflows for IcM data processing; integrated Azure OpenAI to classify root causes and recurring outage patterns.
- Automated DRI notifications and escalation workflows through Logic Apps; generated Excel and Word reports for incident review and operational reporting.
- Provisioned secure Azure infrastructure as code with Bicep, managed identity, Key Vault, Blob Storage, Service Bus, Application Insights, and Entra ID; delivered a monitoring dashboard, runbooks, troubleshooting guidance, and knowledge-transfer documentation.

AI Software Engineer — Quadrant Technologies

Aug 2025 – Present | Redmond, WA

- Architected and deployed scalable AI solutions using Azure OpenAI and Azure Cognitive Services, enhancing threat-intelligence analysis and automating data-driven mitigation strategies.
- Implemented Azure Document Intelligence workflows to extract and structure unstructured data, improving data reliability for downstream machine learning systems.
- Developed RAG (Retrieval-Augmented Generation) architectures integrating Azure AI Search with LLMs for accurate, low-latency retrieval across security vulnerability reports.
- Built Sentinel, an autonomous DevOps orchestrator bridging Jira and GitHub (Azure OpenAI, GitHub Copilot, MCP) that takes tickets from To Do to Done with minimal human intervention.

Artificial Intelligence Trainee — Quadrant Technologies

Jul 2025 – Aug 2025 | Redmond, WA

- Designed and implemented ETL processes for security logs and vulnerability reports; developed data-ingestion systems for endpoint and network security to enhance risk analysis.
- Leveraged machine learning to analyze threat-intelligence data and uncover patterns for data-driven mitigation; created cloud-security monitoring dashboards supporting compliance and data integrity.

Assistant to Solutions Engineer — QikCell by tickioT

Jan 2025 – May 2025 | Los Angeles, CA

- Served as the primary technical liaison for client field trials, bridging hardware constraints (antennas/PCBs) with AI software requirements.
- Customized IoT product demonstrations using Python scripting to simulate client use cases; showcased AI-driven analytics for predictive maintenance and operational efficiency.

IoT Engineer in R&D — PeopleLink Unified Communications Pvt. Ltd.

Jun 2018 – May 2019 | Hyderabad, India

- Executed end-to-end testing of connected embedded devices; developed automated Python test scripts that reduced manual testing time by 20%.
- Analyzed communication protocols (TCP/IP, UDP) to troubleshoot real-time latency issues; collaboration with R&D cut post-launch defects by 20%.

User Tester (Freelance) — ColorOS

Jun 2018 – Jul 2022 | India (Remote)

- Tested ColorOS Beta and Alpha releases across versions 5.0–12.1; documented defects and proposed product improvements with cross-functional teams.

Student Intern — Pantech ProEd Pvt Ltd

Jun 2020 – Jul 2020 | Hyderabad, India

- Contributed to a high-speed 64-bit binary comparator design, optimizing parameters in Verilog and VHDL.

SELECTED PROJECTS

Sentinel — Autonomous DevOps Orchestrator — Quadrant Technologies

Nov 2025 – Present | github.com/Unigalactix/SENTINEL

- Built an Azure OpenAI integration between Jira and GitHub to automate polling and DevOps workflows, incorporating GitHub Copilot and the Model Context Protocol (MCP).

JobPilot — AI-Powered Job Application Co-Pilot — Independent

Feb 2026 – Present | github.com/vangipuraputarunsalesh/jobpilot

- Built a JavaScript, Python, and FastAPI application for AI-assisted job-search workflows; deployed on GitHub Pages through a Cloudflare Worker proxy with client-side AES-GCM encryption.

GasOps MTR Extraction — Quadrant Technologies

Sep 2025 – Present | github.com/Unigalactix/GasOps-DI-JSON

- Built a JSON extraction pipeline using Azure Document Intelligence and the OpenAI API for AI/OCR orchestration and structured downstream processing.

Image Denoising Using Deep Learning — California State University, Northridge

Dec 2024 – May 2025 | github.com/Unigalactix/ConvIR

- Developed a dual-domain image-denoising framework in Python, TensorFlow, and PyTorch; achieved >12 dB PSNR improvement at high AWGN levels with a UNet-inspired architecture.

EDUCATION

Master of Science in Computer Engineering — California State University, Northridge | Aug 2022 – May 2025

Bachelor of Technology in Electronics and Communication Engineering — JB Institute of Engineering and Technology, India | Jul 2019 – Jun 2022

CERTIFICATIONS

Anthropic: AI Capabilities and Limitations; Introduction to Claude Cowork; AI Fluency: Framework & Foundations; Claude with Google Cloud's Vertex AI; Building with the Claude API; Claude in Amazon Bedrock; Model Context Protocol: Advanced Topics; Introduction to Model Context Protocol; Claude Code in Action.

Microsoft (6x Azure): Azure AI Engineer Associate; Azure Data Scientist Associate; Azure Administrator Associate; DevOps Engineer Expert; SQL AI Developer Associate; Fabric Data Engineer Associate; Career Essentials in Generative AI (Microsoft & LinkedIn).

Atlassian: IT Service Management (ITSM) Professional Certificate. **Astronomer:** Apache Airflow 3 Fundamentals; DAG Authoring for Airflow 3. **Docker, Inc.:** Docker Foundations Professional Certificate. **GitHub:** Career Essentials in GitHub Copilot.

PUBLICATION

"Readers for the Visually Impaired Using Raspberry Pi," IJRAR, May 2022 — developed a Python and Tesseract OCR prototype converting printed documents into audio for visually impaired users.
