

Rajesh Kodaganti

Software Development Engineer

Redmond, WA • (747) 366-0793 • rajeshkodaganti.work@gmail.com • [LinkedIn](#) • [GitHub](#) • [Microsoft Learn](#)

SUMMARY

Software Development Engineer with a Master of Science in Computer Engineering and hands-on experience designing and building scalable, distributed, cloud-native systems in Python. Skilled in object-oriented design, microservices, REST API orchestration, CI/CD, production monitoring and troubleshooting, RAG, document processing, and secure infrastructure as code. Delivered a six-phase outage-management pipeline supporting Severity 0-2 incidents across 70+ Microsoft Identity services.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, R, C, Embedded C, HTML

Software Engineering: FastAPI, REST API Orchestration, Microservices, Object-Oriented Design, Event-Driven Architecture, ETL & Data Pipelines, Git/GitHub, Testing & Troubleshooting

Azure & DevOps: Azure Functions, Logic Apps, Service Bus, Blob Storage, Key Vault, Application Insights, Entra ID, Bicep, CI/CD, Docker, Apache Airflow

AI & Machine Learning: Azure OpenAI, Azure AI Search, Azure Document Intelligence, RAG, LLMs, NLP, Prompt Engineering, PyTorch, TensorFlow, Model Context Protocol

EXPERIENCE

Microsoft

Oct 2025 – Present

AI Software Engineer (Contract) | Redmond, Washington

- Designed and developed a scalable, six-phase outage-management pipeline automating incident ingestion, enrichment, classification, validation, and reporting for Severity 0-2 incidents across 70+ Microsoft Identity services
- Built Python Azure Functions and KQL workflows for IcM data processing and integrated Azure OpenAI to classify root causes and recurring outage patterns

Quadrant Technologies

Aug 2025 – Present

AI Software Engineer | Redmond, Washington

- Architected and deployed scalable AI solutions with Azure OpenAI and Azure Cognitive Services for threat intelligence and automated mitigation workflows
- Implemented Azure Document Intelligence workflows to extract and structure unstructured data

Quadrant Technologies

Jul 2025 – Aug 2025

Artificial Intelligence Trainee | Redmond, Washington

- Designed ETL processes for security logs and vulnerability reports and developed endpoint and network-security data-ingestion systems to enhance risk analysis
- Applied machine learning to threat-intelligence data and created cloud-security monitoring dashboards supporting compliance and data integrity

QikCell by tickIoT

Jan 2025 – May 2025

Assistant to Solutions Engineer | Los Angeles, California

- Served as the primary technical liaison for client field trials, bridging antenna and PCB hardware constraints with AI software requirements
- Customized IoT demonstrations using Python to simulate client use cases and showcase AI-enhanced signal processing, predictive maintenance, and operational efficiency

ColorOS

Jun 2018 – Jul 2022

User Tester (Freelance) | India (Remote)

- Conducted user testing for ColorOS Beta and Alpha versions (5.0 to 12.1)
- Documented defects and proposed product improvements in collaboration with cross-functional teams

Pantech ProEd Pvt Ltd

Jun 2020 – Jul 2020

Student Intern | Hyderabad, India

- Contributed to the development of a high-speed 64-bit binary comparator
- Optimized design parameters using Verilog and VHDL

PeopleLink Unified Communications Pvt. Ltd.

Jun 2018 – May 2019

IoT Engineer in R&D | Hyderabad, India

- Executed end-to-end testing of connected embedded devices and developed automated Python test scripts that reduced manual testing time by 20%
- Analyzed TCP/IP and UDP communication protocols to troubleshoot real-time latency issues; collaboration with R&D cut post-launch defects by 20%

EDUCATION

California State University, Northridge

Aug 2022 – May 2025

Master of Science - MS, Computer Engineering

JB Institute of Engineering and Technology

Jul 2019 – Jun 2022

Bachelor of Technology, Electronics and Communication Engineering | Score: 7.45

SELECTED PROJECTS

IcM Outage Automation - Microsoft Identity LiveSite

Python, Azure Functions, KQL, Azure OpenAI, Logic Apps, Bicep

A six-phase outage-management system that automates incident ingestion, enrichment, classification, validation, escalation, and reporting for Microsoft Identity LiveSite operations.

JobPilot: AI-Powered Job Application Co-Pilot | [link](#)

JavaScript, Python, FastAPI, Cloudflare Workers, Anthropic API, AES-GCM

An AI-powered job application co-pilot built with JavaScript, Python, and FastAPI. JobPilot aggregates listings from Adzuna, JSearch, and USAJobs and supports AI-assisted application tailoring, GitHub Pages deployment, a Cloudflare Worker proxy, and client-side AES-GCM encryption.

Sentinel: Autonomous DevOps Orchestrator | [link](#)

Azure OpenAI, GitHub Copilot, MCP, JavaScript, DevOps

An AI-driven bridge between Jira and GitHub designed to automate the manual overhead of the DevOps lifecycle, taking tickets from 'To Do' to 'Done' with minimal human intervention. Associated with Quadrant Technologies.

GasOps MTR extraction | [link](#)

Azure Document Intelligence, OpenAI API, Python, FastAPI, API Testing

Built a JSON extraction pipeline at Quadrant Technologies using Azure Document Intelligence and the OpenAI API for AI/OCR orchestration and structured downstream processing.

Image Denoising using Deep Learning | [link](#)

Python, TensorFlow, PyTorch

Developed ConvIR, a deep learning framework for image denoising targeting additive white Gaussian noise (AWGN) using a dual-domain learning approach. Associated with California State University, Northridge.

SELECTED CERTIFICATIONS

Fabric Data Engineer Associate • Azure AI Engineer Associate • DevOps Engineer Expert • Azure Administrator Associate • Azure Data Scientist Associate • SQL AI Developer Associate • Microsoft Azure AI Essentials Professional Certificate • Career Essentials in GitHub Copilot Professional Certificate • Docker Foundations Professional Certificate
